

Rotatable Ceiling Pendant Light

Use pliers to pull on the steel wire
Hang into the hole from the gap

Installation steps

1. Assemble the two rocker arms and stretch the steel wire to buckle it up in the groove as shown in the figure;
2. Use pliers to elongate the steel wire on both sides and hang it on the ceiling panel within the gap on both sides;
3. Drive the gecko into the ceiling and use self tapping screws to secure the hanging plate locked in the ceiling;
4. Lock the power and ground wires in the corresponding positions on the wiring block
5. Align the suction cup with the hole position and lock it with a straight nut;
6. Lock the two machine meters and rotate them half a turn to ensure that the lamp body is capable of rotation and positioning
7. Place the lampshade on the lamp holder, and the lamp holder ring can lock the lampshade
